E-Business Models for Developing Economies

Overview

This course is designed to introduce internet-based business/management concepts to students/academics/industrialist having little or no prior exposure to the area. It will cover the management roles and potential of the internet as a tool for business to increase competitiveness, effectiveness and efficiency through various organizational considerations such as management information systems, other functions, and decision processes. This course will understand and apply the basic elements of e-Business. Class time will be used to cover/clarify fundamental internet and business principles through the analysis of case studies, discussions based on assigned course readings (journal articles and book chapters), lectures by professors/invited guests, and presentations by participants using Tech talk models (short presentations). Class lectures will expand on the text, with application oriented examples to consolidate theories and possibly some video presentations. Handouts and technology will be used in this course, when appropriate. Tech talks around current issues related to technology and its implications on business will also be discussed as interactive class activities and exercise. The course will be led by an international scholar in the area of e-business & information technology with considerable experiences in industrial and academic settings. The course can/will be planned and offered as per the norms set by the Government of India-MHRD/UGC guidelines and international standards (e.g., Canadian curriculum). This course outline was developed for Indian participants with global and local considerations pertinent to this area of study.

Course Objectives:

This course is interdisciplinary nature with a technology/management perspective. It aims to equip candidates with an insight into the challenges, opportunities, and complexities of today’s e-business specifically in cultural, demographic, taxations, and privacy and security issues. It will also provide an overview of selected global and national strategies from consumers’ and businesses perspectives. The main objectives of the course are as follows:-

- To improve the understanding related to demographic and cultural transition of consumers especially in the Indian context;
- To improve the understanding about the power and potential of Internet as a tool for e-business in global and local perspectives/contexts;
- To critically examine the challenges, opportunities, and complexities in integrating technology with businesses to increase competitiveness, effectiveness, and efficiency in organizations;
- To improve the understanding of the e-Management and its roles of effective decision making.
- To provide an interactive forum for the diversity of participants in regards to their research interest, disciplines and practices.
Dr. Ernest Johnson is an associate professor, teaching technology and engineering management at the Faculty of Business Administration, University of Regina, SK, Canada. Prior to this, he taught at Acadia University, NS, Canada and American College, Madurai, India. He completed his doctoral studies in e-business at Keele University, UK, graduate degrees (MS and MBA) and undergraduate engineering studies in India. He has published his work in scientific journals in the areas of eBusiness, marketing, and information technology and presented his work at several international conferences and educational institutions in India, Canada, Australia, UK, Sweden, and US.
